

Optimization of the next generation of
Cosmic Microwave Background (CMB)
Satellite mission

Duc Thuong HOANG

Supervisor: Assistant.Prof. Guillaume Patanchon

I. Introduction -> Evolution of the Universe

I. Introduction -> CMB polarization

The polarization can be decomposed into 2 components:

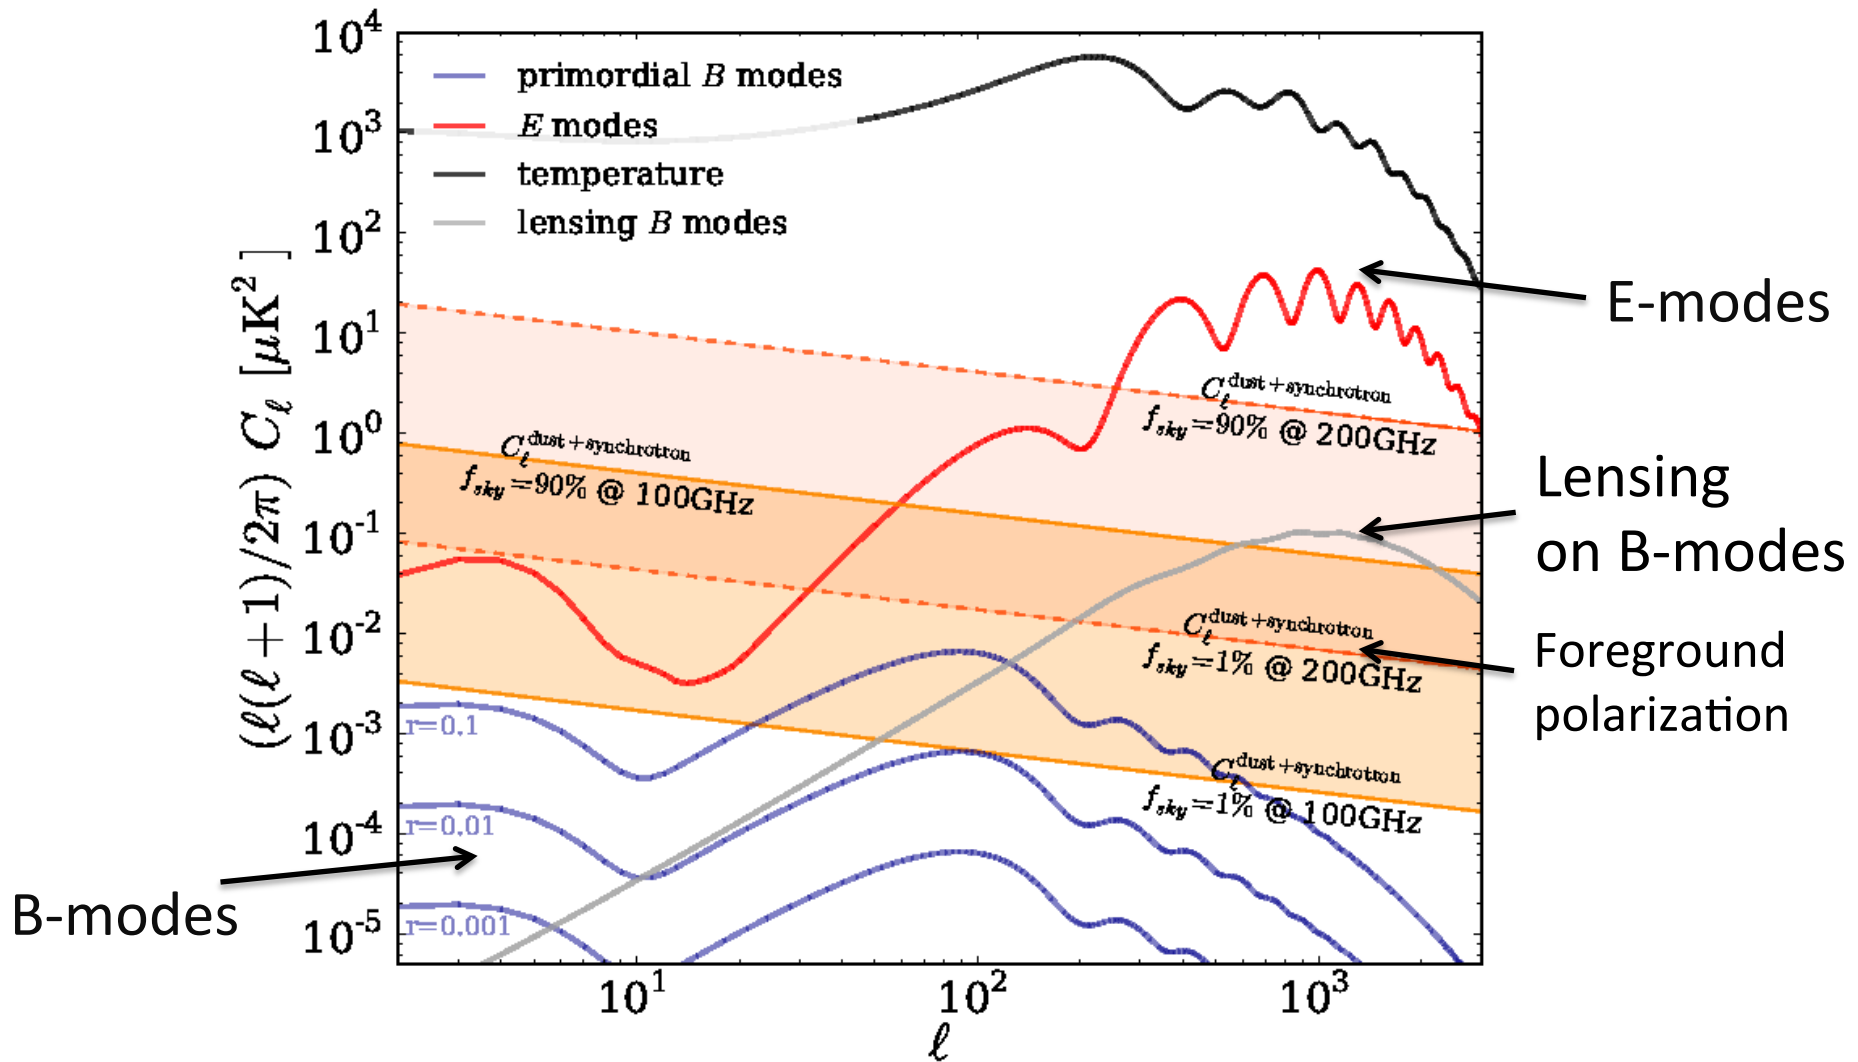

- E-mode (like an electric field) or gradient-mode
- B-mode (like magnetic field) or curl-mode

(Waynehu)

E and B angular power spectrum

II. Future CMB satellites

For example: CORE

The Cosmic Origin Explorer

LiteBird (JAXA)

II. Potential systematic effects

- Beam mismatch
- Cosmic rays
- $1/f$ noise
- *Band-pass mismatch*
- Thermal fluctuations
- ...

The Galactic components contaminate the measurement of CMB polarization

II. Band-bass mismatch

(Planck filter shapes)

*=> different relative calibration
between CMB and other components
with different spectra.*

III. Band-bass mismatch effect

- Detectors measure signal on the sky:

$$S_a(t) = \Delta T_{\text{CMB},p} + Q_p \cos 2\psi(t) + U_p \sin 2\psi(t) + \Delta T_{\text{Gal},a,p}$$

$$S_b(t) = \Delta T_{\text{CMB},p} - Q_p \cos 2\psi(t) - U_p \sin 2\psi(t) + \Delta T_{\text{Gal},b,p},$$

$$\Delta S = \frac{S_a(t) - S_b(t)}{2} = Q_p \cos 2\psi(t) + U_p \sin 2\psi(t) + \delta T_{\text{Gal},p},$$

I: Intensity and Q, U are Stoke's parameters of the CMB polaziration

ψ Detectors angle

III. Band-bass mismatch effect (74 detectors)

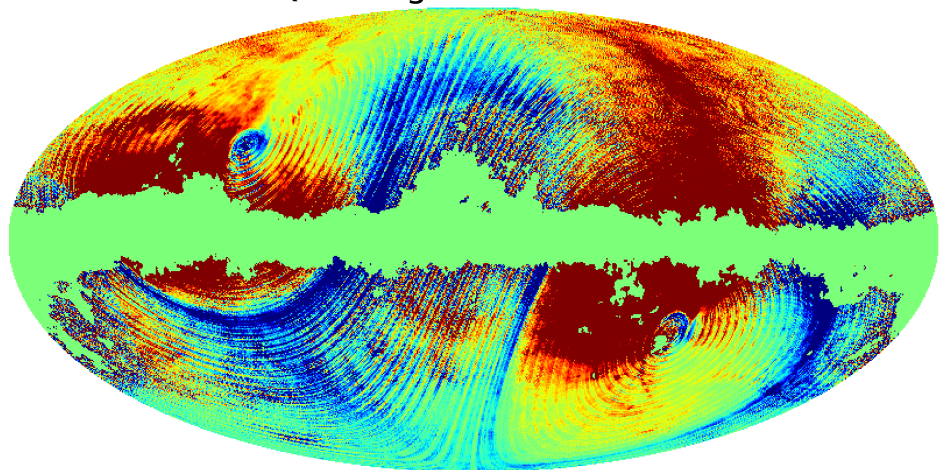

Q leakage

U leakage

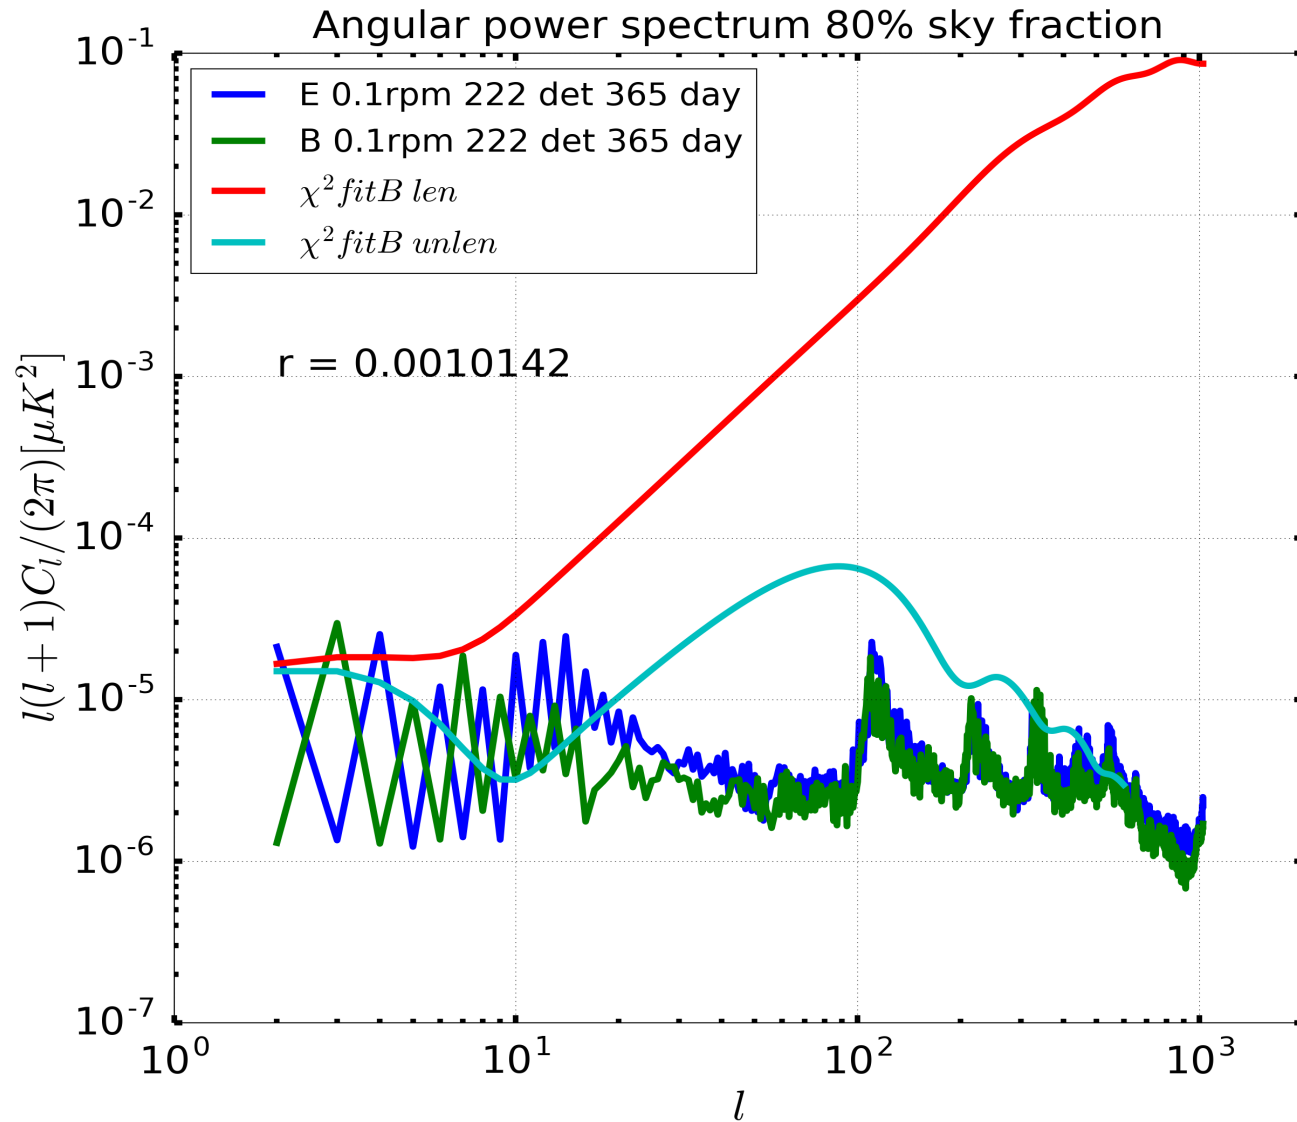

Q leakage mask 74180

U leakage mask 74180

III. Band-bass mismatch effect

IV. Conclusions and future work

- Band-pass mismatch is non-negligible effect due to leakage from intensity to polarization.
- Band-pass mismatch depend on scanning strategy of the satellite.
- I am working on correction methods.
- In the near future, I will work with another systematic effect as particle interaction with detector arrays.

Merci Beaucoup !
